

## Benefits of using Moldcare with your MR-Linac

If you are using MRI-Linac in your facility, Moldcare may be the most ideal choice for customizable cushions for patient positioning.

Thermoplastic types of customizable cushions require ovens or water baths for activation which must be placed outside of the treatment room due to the magnetic field of the MRI-Linac.

Moldcare is MR Safe customizable cushion and easily activates with a small spray of water.

- No need to use a water bath or oven.
- No need to leave the room to activate cushion.

**Therefore, the entire treatment process is completed in one room.**

**Moldcare saves time and increases throughput for preparation of customizable patient positioning cushions.**
